// TRENDING

Facebook users can now tell the algorithm what to drop.

JOTHI SWAROOP

SWIPE

That sounds like a user setting. It is also an ads problem.

Meta's 13 Oct update lets people say, in plain words, see less of this.

That's not a filter on one post. It's a standing instruction to the feed.

05

Your reach was never just about your ad. It was always half the viewer's taste.

Now that taste is explicit, and the algorithm leans on it harder than before.

07

THE TRAP

A page's reach can fall for a reason that has nothing to do with the ad at all.

08

Most dashboards still show cost and clicks. None of them show what audiences just told Facebook to mute.

09

So before you touch the creative or the bid, check if the audience changed, not you.

10

Reach fell. The algorithm didn't break. The audience changed what it asked for.

Check your numbers before you blame the algorithm. It is rarely the first thing that moved.
